      (group being reviewed)   *(group writing the review)*

- **Have the team explain their views to you and demonstrate selecting from them.**

Comments: Do these views make sense in the context of their project? Other comments?

Yes they all make sense and serve a functional purpose, just waiting to add more data to make it more useful.

- **Have the team start their app.**

Comments: Are the "crud" portions of the app (from HW5) plus the view portions of the app all available from one main page? Other comments?

Yes, the links are all available on the home page.

- **Have the team demonstrate each of the view functions in the app.**

Comments: Does each one allow the user to enter some input criteria for the view's query and then display the data in a chart? Other comments?

Yes, each view allowed the user to change a parameter to modify the view.

- **Have the team show you what indexes they created and explain why.**

Comments: Do these indexes make sense with respect to the view queries, or are they intended for some future functionality?

All indexes make sense with respect to the views, they just don't currently have enough data for the index to take effect. In the future, it will help.

GP4 Self Evaluation Form

Group name: __dr__

Self Assessment

- Have you pushed today's version to github?

  yes

- Does your web application run and contain routes for all the HW5 requirements as well as for the views required in GP4. If not, explain what work is not completed.

  yes ~~except from graph but~~

- Did you change the database model while working on GP4? If yes, explain what changes and why you made them?

  No, not for this project deadline but we have generated more data to add after this project.

- Did you need to change any of your data load/generate code during GP4? Did you revise any of the views you had created earlier? If yes, explain what changes you made and why?

  No, not for this project but we are planning to add more data.

- Did you complete the web app components for your views? Are you satisfied with them?

  yes

- Were you all able to work on the database and with github as needed for GP4? Did any team members need to give their work to another team member to incorporate or submit? Please list any team members still having trouble with the tools (so we can help).

  yes

Reflection

After hearing the comments from your peers and the instructor(s), what areas in your system do you plan to revise during the next stage of development?

- add more data to our database
- fix minor display errors
- add drop down improvements
